Message from the CEO

"I'm convinced that about half of what separates the successful entrepreneurs from the nonsuccessful ones is pure perseverance."

Bakiri Angalia

— CEO

Global Data Technologies (Formerly Global Skill Consulting and Education) was established in early 2011. Since its inception, our team of dedicated professionals has played a critical role in business development, business alliances and solutions research. We have catered solutions to both the Public and Non-Public sectors of Tanzania. Global Data is a business built on the expertise and dedication of our people, and this has added several esteemed clientele to our portfolio, such as the National Electoral Commission, Tanzania Defense Force, Tanzania atomic energy commission-TAEC, Tanzania Immigration Department, Engineers Registration Board, Kilimanjaro Christian Medical Centre (KCMC), Ministry of education science and technology and others.

It gives me great pleasure to welcome you to Global Data Technologies. Selecting an IT services partner is foundational and will likely cause ripples of impact throughout your organization for years to come. That decision bears tremendous weight in my mind, encouraging the Global Data Technologies team and me to bring **infinite possibilities** to each engagement. We don't start conversations with a pitch. Instead, we take the time to listen to your needs, goals, business objectives and, yes, technical challenges! For the past 12 years, our team has been learning from and growing with our customers by providing proactive and trusted IT solutions. With that experience comes patience, knowledge, and a solid toolkit that offers flexible solutions to meet the needs of evolving businesses.

We Focus on People, Not Technology

It may seem odd to hear that a technology company needs to put technology first. Yes, it's an essential aspect of what we do, but the most critical component of our client's success is ensuring that each company has access to the right people to support their unique needs. We know that introducing a cohesive technical solution is made possible by internal staff members and their willingness to adopt new technologies. With this focus on people, we can make recommendations with the most outstanding possibility of success instead of simply going with cookie-cutter recommendations that may not be the best fit for your company's culture.

Who We Are

— About Us

We pride ourselves on our commitment to customer service. We work closely with our clients to understand their specific needs and tailor our solutions to meet those needs. We also offer ongoing support and training to ensure that our clients are getting the most out of their investment.

Global Data Technologies was constituted in 2011 to provide the highest technological solutions and services in the Information and Communication Technology (ICT), Security, and communications sector for privately owned or leading governmental institutions in Tanzania. The Global Data service concept depends on Unconditional Customer Satisfaction. Together with its professional staff operating in Arusha headquarters and the largest cities of Tanzania, Global Data is in full control of all of its installed systems located all over Tanzania, trusting its technical staff that consists of highly expert engineers and technicians in advanced security technologies

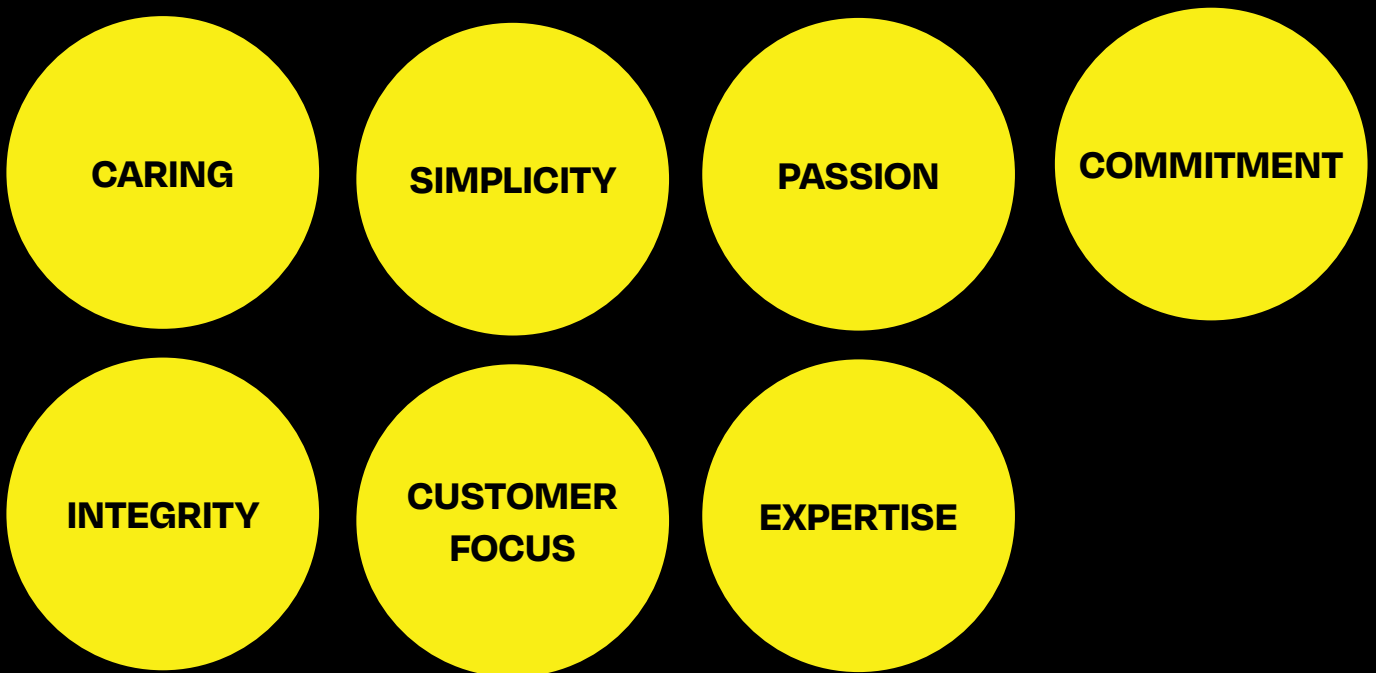

and telecommunication systems. Global Data has been the leading counselor and installer since the commencement of activities in the ICT, Security, and Communications systems in relevance with project design and implementation services. It provides solutions by applying the latest technological events.

Our Vision

To be a successful global information technology company trusted by its customers for service excellence, caring for its employees and collaborating with our customers to deliver innovative and value driven ICT products and services.

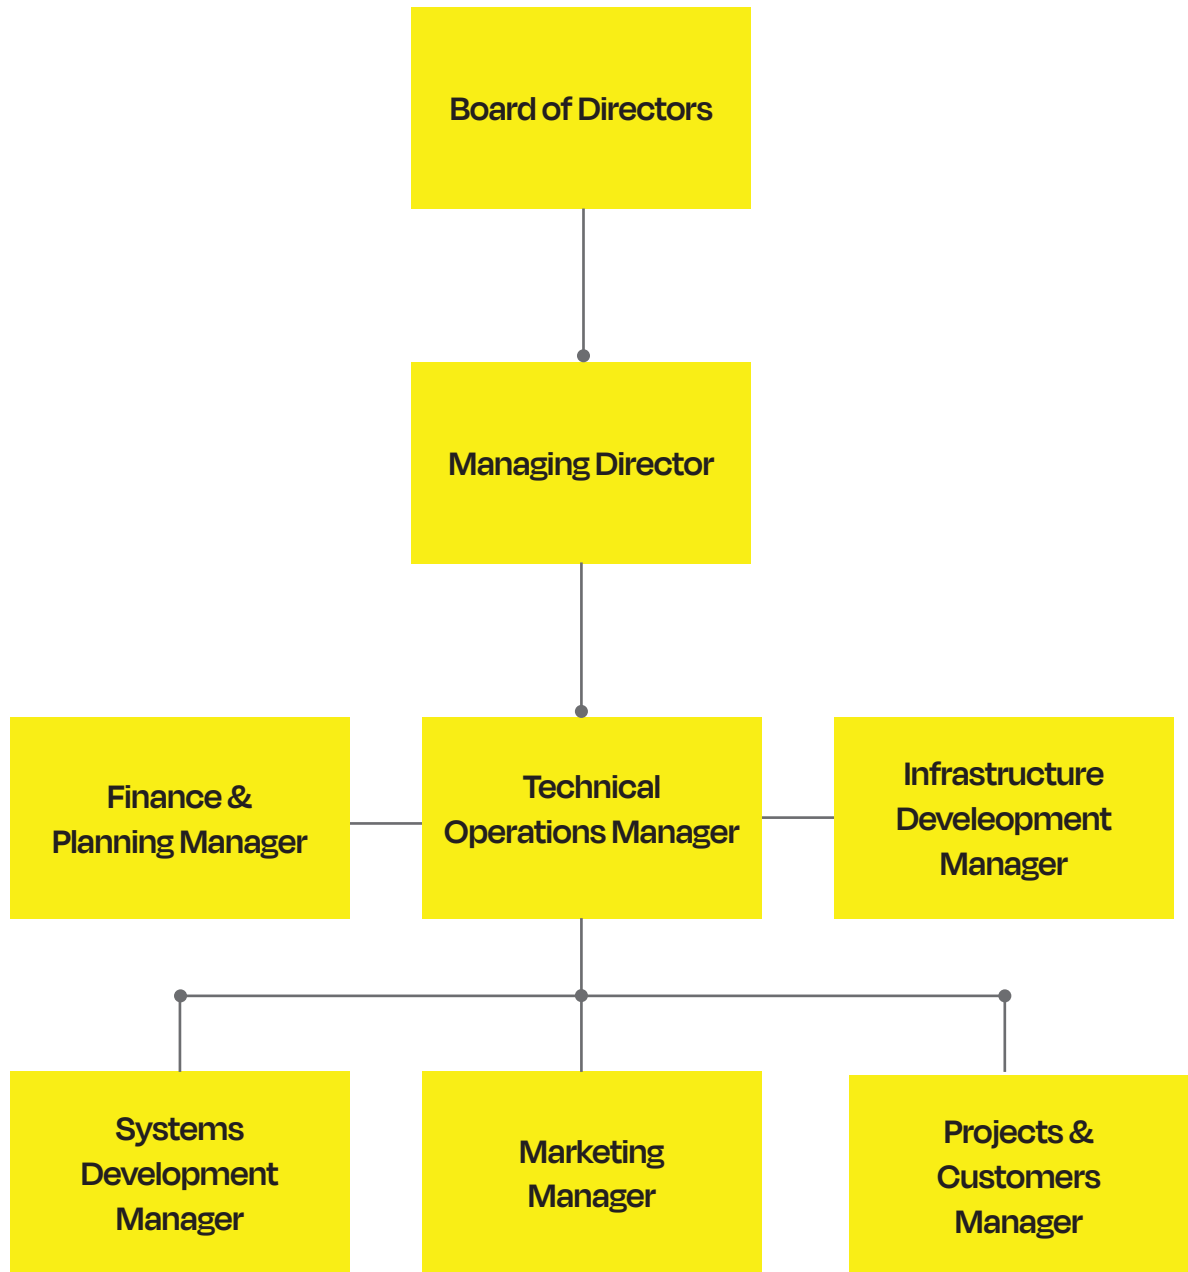

Our Core Values

Our Culture Statement

We are dedicated to serving our clients with excellence and committed to working together as a team for our company's success and our client's business. We shall take responsibility for our performance, withholding our core values and commitment while being accountable for every task upheld.

Our Services

Whether you're looking to build your office Intranet, install Security systems, or need help with your Fire alarm systems, we can help. Our solutions are designed to be flexible, scalable, and easy to use, so you can focus on what you do best - running your business.

STRUCTURED CABLING

CCTV SYSTEMS

ACCESS CONTROL

TELEPHONE SYSTEMS

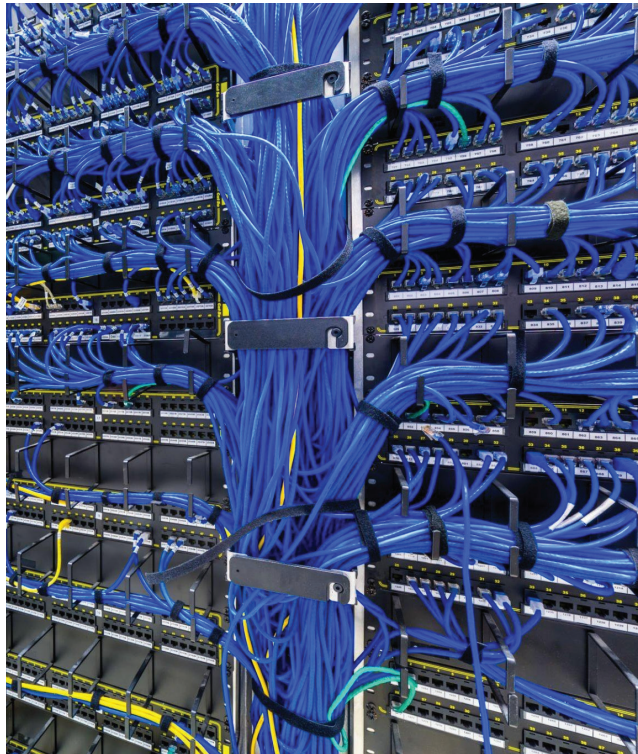

FIRE ALARM SYSTEMS

ALARM SYSTEMS

Services

1. Structured Cabling

We offer the most scalable structured cabling solutions with a strong track record for installing and commissioning structured cabling on time and within budget. Our structured cabling includes comprehensive solutions for all infrastructure types, including CAT5e CAT6e fiber optic and wireless networks.

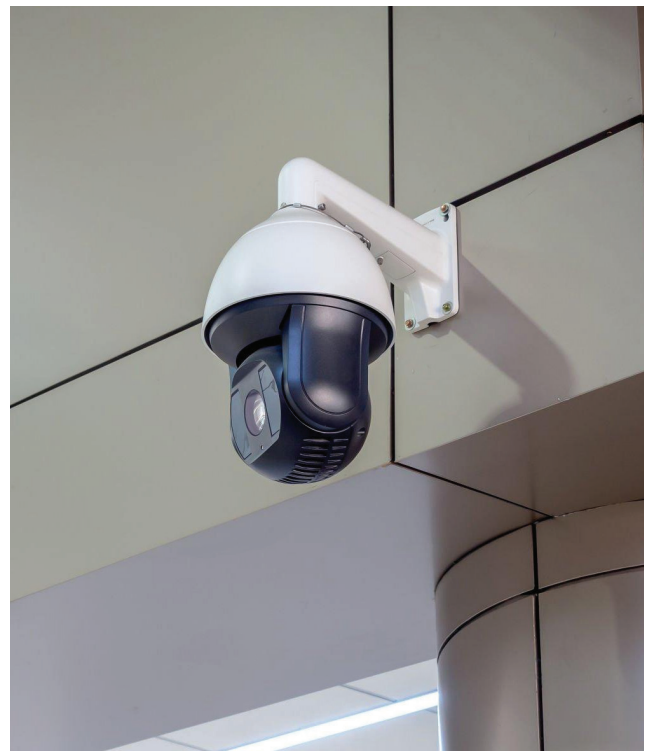

Our project management services include pre-installation inspection, installation and commissioning (closeout), all carried out under strict installation guidelines and the supervision of certified data cabling installers.

Being one of the largest structured cabling providers in Tanzania, our professional approach, well-defined technical processes, and certified data cabling installers assist in the risk-free commissioning of cabling infrastructures for organizations and data centers.

2. Security Cameras

Surveillance and security cameras provide security for your home and your organization. We provide a range of highly advanced security cameras such as CCTV dome cameras, CCTV surveillance cameras, IP cameras, zoom cameras, and night vision waterproof cameras. Most of our surveillance systems and security cameras are equipped with DVR (Digital Video Recorder) systems and DVR viewer software for Windows and Mac-based computers.

At Global Data, we know that nothing is more important to you than the safety and security of your business and its employees. Our video surveillance systems give you peace of mind by knowing you can observe any activity on your property even when you aren't there. Security cameras and closed-circuit TV can reduce your liability and lost revenue, which often occurs in businesses due to fraud, theft, or false claims.

3. Access Control

Global Data access control systems help prevent unauthorized entry into your facility or an area within your facility. Our knowledgeable representatives will get to know your building and your business to provide the right solution for your access control needs. We use innovative technology from leading manufacturers and customize your system to include components and functionality based on your specific requirements.

Our Solutions Include

1. Auditable trail of access-related events Integration with security systems to sound alarms.
2. Control of employee access to certain times or days of the week
3. Monitoring of specific areas and integration with cameras
4. Fingerprint, swipe card, proximity card, keypad or biometric access Linking of multiple facilities to one central monitoring location

4. Alarm Systems

Global Data installs reliable and advanced wireless and conventional technologies for the security of homes and offices, integrating them, upon request, with electronic detection and automation systems compatible with the solution.

Global Data designs various projects intended to satisfy all sorts of requirements and to be compatible with all sorts of solutions of different scales and designs depending on the operating scenario provided by the customer and the risk analysis carried out by our engineers, and makes turnkey deliveries with an optimum equipment configuration.

5. Telephone Systems

Our wide range of telephone systems helps businesses establish effective communication channels, control costs and connect to customers and partners worldwide. Our customized telecommunication solutions include phone systems, PABX, VOIP, and IP phones.

Global Data Technologies supplies business telephone systems from leading manufacturers, including Samsung, Panasonic, and Hybex. The Samsung phone systems include a wide range of models such as Samsung 7030, Samsung 7100, Samsung 7200, and Samsung 7400 – each of the phone systems best suited for your type of requirement.

The VOIP (Voice over Internet Protocol) phone systems are trending due to the high advancement in VOIP services. Many organizations are switching to VOIP phone systems due to their fast-paced speed and significant cost savings.

6. Fire Alarm Systems

The importance of an effective fire alarm system

An early warning via an effective fire alarm system is absolutely critical to minimizing damage and threat to human life in the event of a fire. Global Data helps you to select, install and service an appropriate system for your building. We can also take on service agreements to maintain existing systems.

Our highly skilled technicians complete work in accordance with;

1. BS 5839-1:2017 Fire detection and fire alarm systems for buildings for non-domestic premises.
2. BS 5839-6:2017 Fire detection and fire alarm systems for buildings for domestic premises.
3. BS 5839-8:2017 Fire detection and fire alarm systems for buildings for voice alarm systems.
4. BS 5839-9:2011 Fire detection and fire alarm systems for buildings for emergency voice communication systems.

PROJECTS WE HAVE DONE

Global Data Technologies is a company that specializes in providing structured cabling, CCTV and Alarm systems solutions to businesses and organizations. Some of the projects that the company may be involved in include:

Structured cabling: This includes the design, installation, and maintenance of network cabling infrastructure such as copper and fiber optic cables, patch panels and racks.

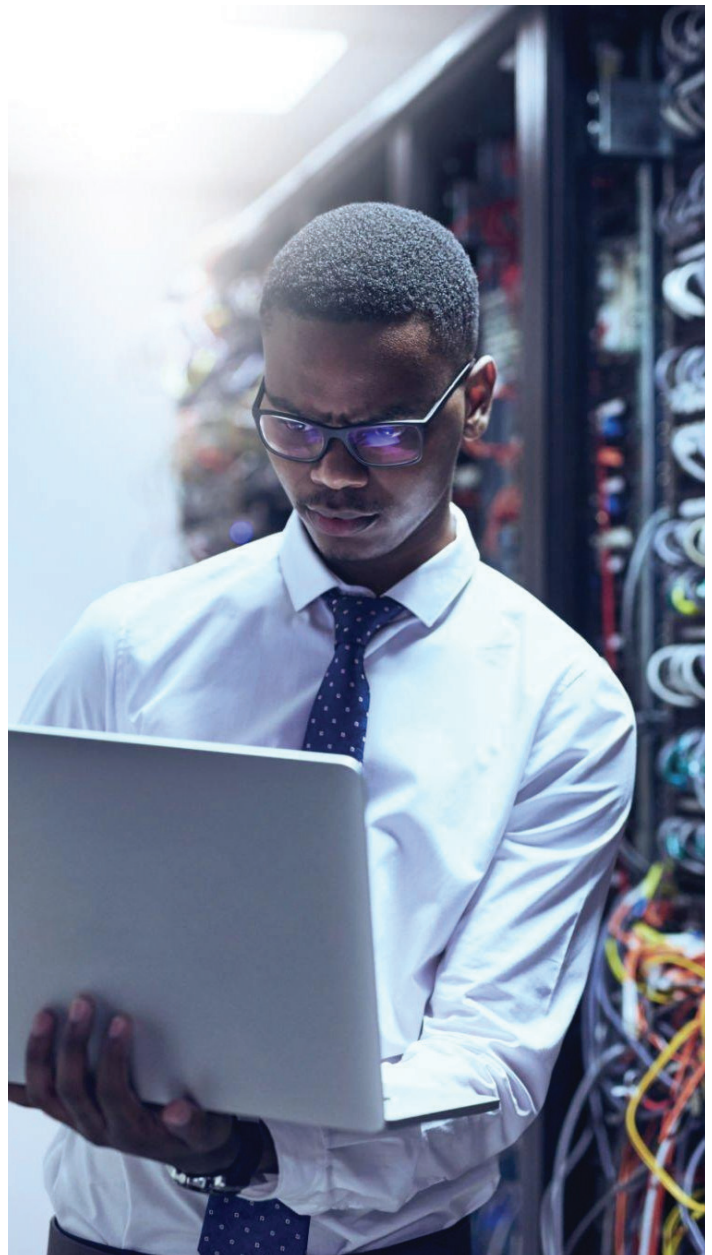

CCTV systems: The company may provide services such as design, installation, and maintenance of CCTV cameras and recording systems for surveillance and security purposes.

Alarm systems: Global Data Technologies may offer services such as design, installation and maintenance of alarm systems to protect buildings and assets from unauthorized access and intrusions.

Access control systems: The company may provide services such as design, installation and maintenance of access control systems to control and monitor access to buildings and restricted areas.

Integration of systems: Global Data Technologies may integrate the different systems such as CCTV, Alarm and access control systems to work together seamlessly and provide a comprehensive security solution.

It's worth noting that these are just some examples of the types of projects that a company like Global Data Technologies may be involved in, and the specific services offered will vary depending on the company's expertise and focus.

WHAT MAKES US DIFFERENT

At Global Data Technologies, we are committed to staying at the forefront of ICT advancements and trends. We continuously invest in research and development to ensure we can offer our clients the latest and most advanced technology.
